RDZ
You Feel, We Care

You Feel, We Care

is our tagline
and contains a renewed promise:
to work every day
with commitment and passion
while offering ***tangible benefits***.

And we do this by developing systems
which are able to ensure
comfort and health
as well as a pleasant living space.

We continue to follow the principles
that have always inspired us :
the use of the ***best materials***,
the research for ***advanced technologies***,
and a ***specialized service*** *for design,*
technical assistance and training.

These are the same reasons
that guided us in
identifying the
perfect comfort system.

In our solution four elements
(surface heating/cooling, air handling,
temperature control, heat pumps)
interact synergistically
to spread in every room
the ***ideal living conditions***,
in which our skin can perceive
a unique ***feeling of wellbeing***.

AIR RENEWAL AND HUMIDITY CONTROL

Two fundamental requirements for healthy, comfortable and energy-efficient buildings.

Now more than ever before, the quality of life – and consequently the comfort – of individuals in workplaces, leisure facilities and homes has become an essential requirement and a priority in terms of design. Keeping the temperature and humidity conditions at a comfortable level for the occupants of a space requires the monitoring and control of various parameters, such as the temperature and humidity of the air, its flow speed and the concentration of pollutants such as CO2, volatile organic components (VOCs), formaldehyde, airborne particles and allergens, etc.
Controlling air quality is particularly important in commercial spaces, offices and homes with high energy efficiency, constructed in accordance with modern building standards and featuring extremely well insulated building envelopes with extremely airtight doors and windows, which drastically reduce the infiltration flow rates often seen in older buildings.
Furthermore, incorrect room ventilation, relying solely on opening windows, can result in lower air quality and cause condensation and mould to form on surfaces, which can be harmful not only to humans but also to the building itself.
Given the importance of this issue, ventilation for buildings and ambient air quality requirements are governed within the European Union by the following standards:

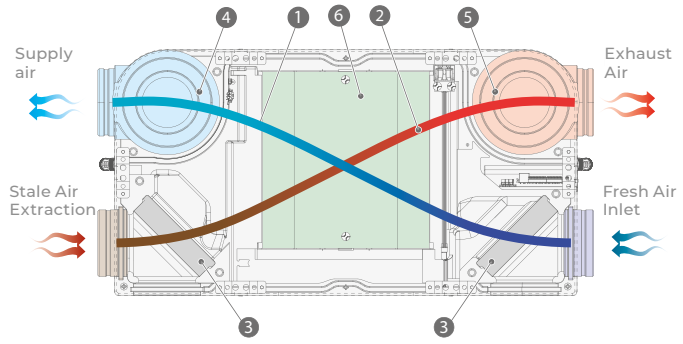
- **EN 16798-1:2019**. Energy performance of buildings – Ventilation for buildings, Part 1: Indoor environmental input parameters for design and assessment of energy performance of buildings addressing indoor air quality, thermal environment, lighting and acoustics – Module M1-6
- **EN 16798-3:2018**. Energy performance of buildings – Ventilation for buildings, Part 3: For non-residential buildings – Performance requirements for ventilation and room-conditioning systems (Modules M5-1, M5-4) **EN ISO 7730:2006**. . Ergonomics of the thermal environment – Analytical determination and interpretation of thermal comfort using calculation of the PMV and PPD indices and local thermal comfort criteria
- **EN 15665:2009**. Ventilation for buildings – Determining performance criteria for residential ventilation systems
- **EN 16890-1:2017**. Air filters for general ventilation – Part 1: Technical specifications, requirements and classification system based upon particulate matter efficiency (ePM)

RDZ, which has always been dedicated to keeping people comfortable in terms of temperature and humidity conditions, has developed air treatment machines that ensure a high level of hygiene within the environments in which they are used.
They can be grouped as follows:

- mechanical ventilation units with heat recovery (MVHR)
- dehumidifiers
- air handling units, known as UC (Comfort Units)

MECHANICAL VENTILATION UNITS WITH HEAT RECOVERY (MVHR)

These machines are used to exchange air from the room for fresh air from outside in a controlled manner, minimising energy waste; the outside air is filtered and released into the room, while stale air from the room is expelled outside. A defining feature of these machines – besides the intake and extraction fans and the filters, of course – is the heat exchanger, which is used to recover the energy stored in the waste air and transfer it to the air entering the room, with a recovery efficiency that, in some cases, may reach and even exceed 90%.



1 *Inlet-Supply Air Flow*
2 *Extract-Exhaust Air Flow*
3 *Air filter*
4 *Supply Air fan*
5 *Exhaust Air fan*
6 *Heat recuperator*

Principle of operation of a dual-flow MVHR unit

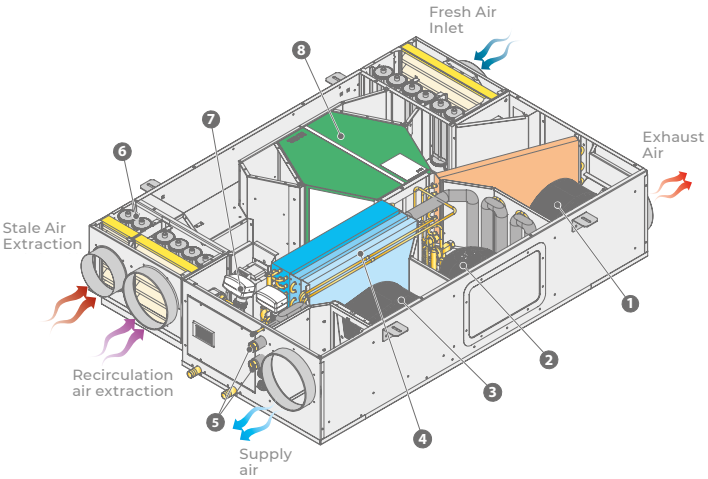
In addition to their basic functions, HRV machines offer additional functions such as free cooling or boost, which can be used to bypass the heat exchanger in favourable indoor/outdoor thermal conditions or to maximise the flow rate of treated air respectively, in order to increase cleaning efficiency during periods in which the space becomes particularly crowded. They may also be used in conjunction with external water coils, in order to emit room temperature air or to integrate the heating/cooling power supplied by the radiant system.

DEHUMIDIFIERS

These machines treat ambient air to keep its humidity level under control. This is also necessary to ensure radiant panel systems operating in cooling mode reach high specific power levels.
The machines differ in terms of the humidity content they remove from the room within a specific unit of time (typically litres/hour of condensation), as well as in terms of fan and air filter performance. They also have internal water coils to allow integration of the heating/cooling power supplied by the radiant system.

AIR HANDLING UNITS (UC)

These machines combine, in a single device, the functions of mechanical ventilation with heat recovery, dehumidification and summer/winter sensible power integration (on demand).



1 Exhaust Air fan
2 Compressor
3 Supply Air fan
4 Heat exchange batteries
5 Hydraulic connections
6 Damper
7 Integration modulating valves
8 Heat exchanger

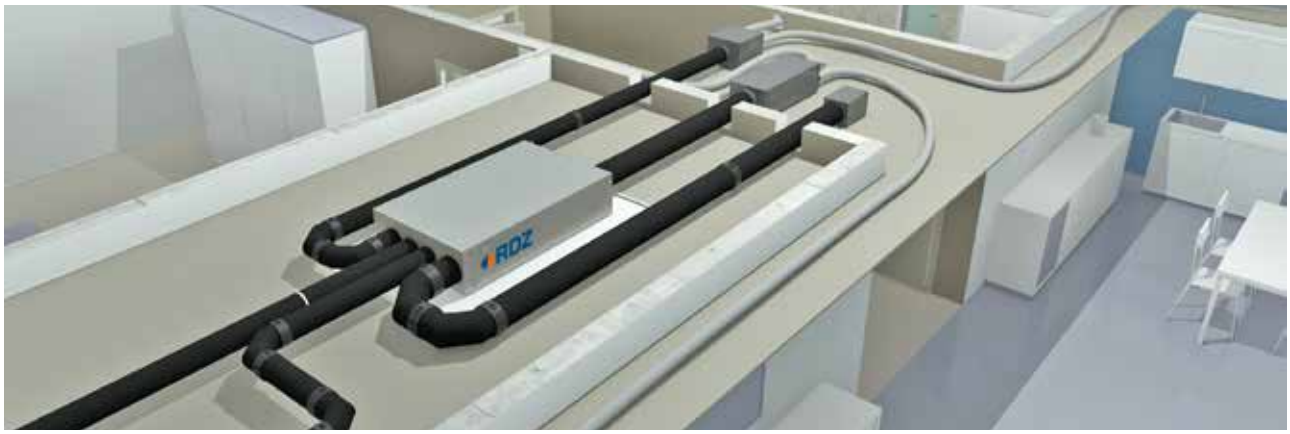
Principle of operation of an air handling unit

They differ in terms of fan and air filter performance, the humidity content they remove from the room within a specific unit of time and their energy recovery rate. They also have internal water coils to stabilise the internal cooling circuit and to integrate the heating/cooling power delivered by the radiant panel system.

DUCTING

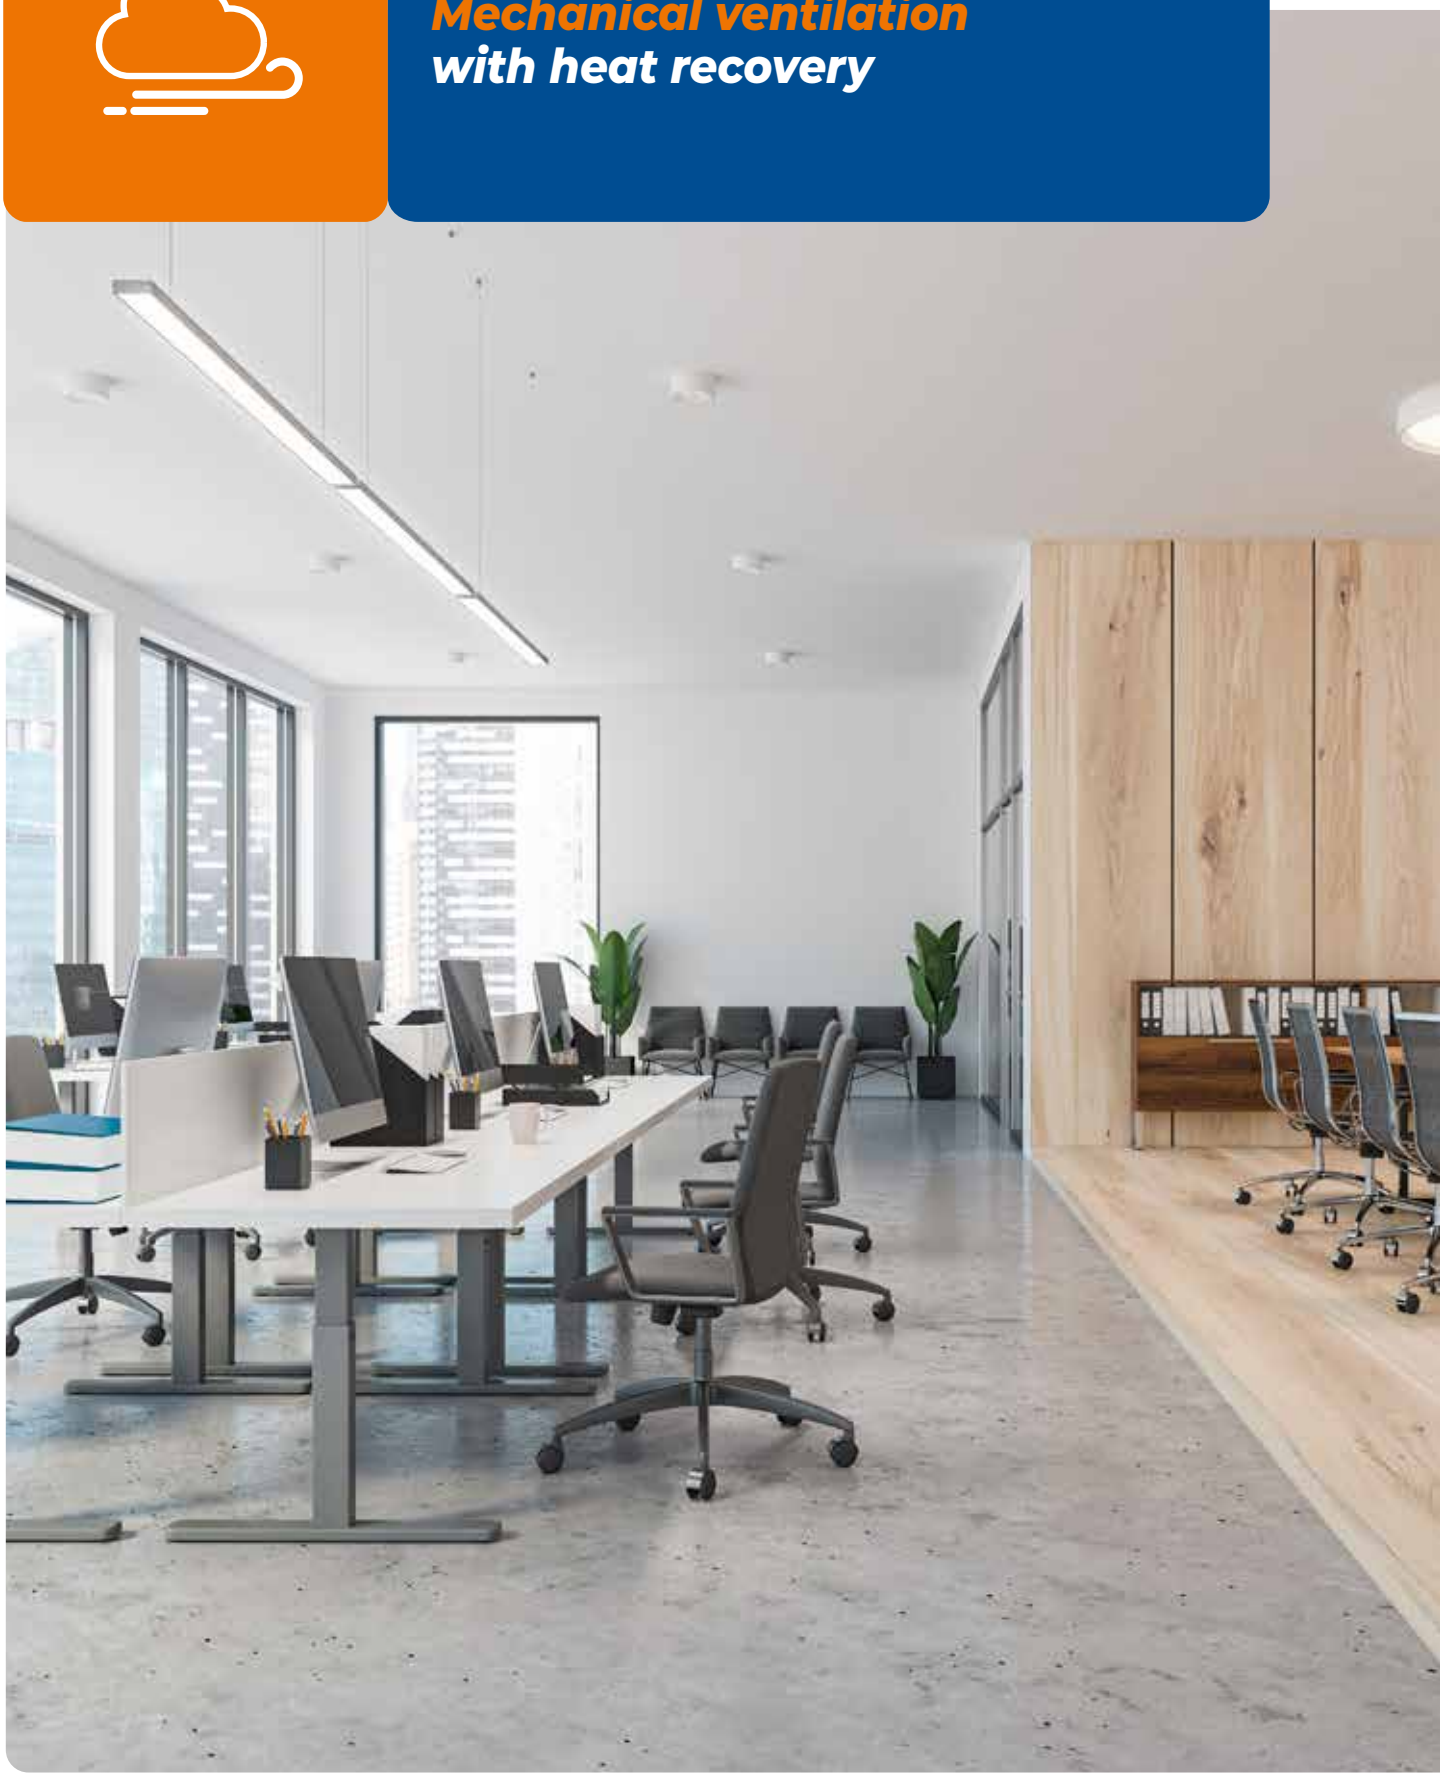
MVHR units and UC units require a network of distribution channels and terminal elements (for intake, room air recapture, outside air intake and expulsion) in order to guarantee an appropriate level of efficiency.
The distribution system must be correctly sized, to guarantee the proper air flow rates and speeds, and to ensure healthy spaces.
To assist designers, the RDZ catalogue contains different types of distribution systems for residential and small commercial applications:

- **Main distribution network ducts:**
  - flexible ducts (FLEX system) given sanitising treatments to guarantee high air quality and prevent the spread of mould and bacteria, also featuring sound insulation as required;
  - rigid ducts in galvanised steel;
  - rigid ducts in expanded polyethylene (EPE system).
- **Ducts for creating the terminal part of the distribution network:**
  - flexible ducts in high-density polyethylene with a circular cross-section (DUO WHITE system), with appropriate distribution plenums;
  - flexible ducts in polypropylene with a semi-oval cross-section (LowAir system), with appropriate distribution plenums.



Example of an air distribution system

Mechanical ventilation with heat recovery



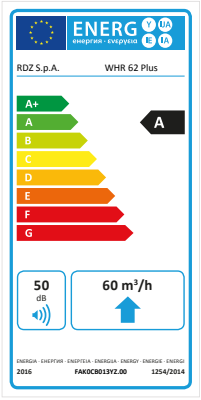
Fresh, clean air without energy waste

Comfort at home, in office or in any other living or working space also depends on the quality of the air we breathe. Air that shall be healthy and rich in oxygen to make us feel good.
Our **mechanical ventilation with heat recovery units** are designed to provide specific quantities **of fresh and clean air** while expelling stale air.
The energy from the extracted polluted air is recovered by a heat exchanger integrated in the unit and transferred to the new clear air supplied.
This preserves indoor thermal comfort and reduces heating and cooling costs.
In commercial buildings and new modern well-insulated houses, pollutants such as VOCs (volatile organic compounds), formaldehyde, indoor particulate matter and others remain trapped inside the rooms to the detriment of the health and well-being of the occupants. This is why we believe it is essential to equip every building with a mechanical ventilation system that guarantees an effective and constant air renewal.

ADVANTAGES OF MECHANICAL VENTILATION SYSTEMS WITH HEAT RECOVERY:

- ***CLEAN AIR AND COMFORT ALL YEAR ROUND***
- ***ROOMS HEALTINESS AND HYGIENE***
- ***ENERGY SAVING THANKS TO HEAT RECOVERY AND FREE-COOLING***
- ***PRESERVATION OF THE VALUEOF BUILDING***
- ***EASY SYSTEM INSTALLATION***

WHR 62 PLUS



MODEL	CODE
WHR 62 Plus	7045227

Decentralized mechanical ventilation unit with alternating pushpull flows, characterized by low noise and equipped with ceramic exchanger offering efficiency up to 90%. It is equipped with double G3 filters (ISO coarse 50%), Ø 160 mm ducting variable in length from 250 mm to 400 mm, tilting front panel to avoid air return, visual and sound indicators for input reception and filter cleaning. Remote control with display screen.

FEATURES

Voltage at 50Hz [V]	Max efficency	Speed	Flow rate m³/h	Power W	Noise at 3 m dB(A)
220-240	93 %	Night	10	3.9	4
		1	20	4.2	9

WHR 62-RC

Remote control with display screen. It allows the management of one or more WHR 62 units connected in series.
It allow to manage the following functions:
- Selection of the fan speed;
- Selection of the operativity mode (air extraction, air supply, combined);
- Setting of night mode;
- Time scheduled air extraction mode;
- Setting of relative humidity threshold;
- Reset of filters alarm;
- Batteries: 2xCR2032 3V.

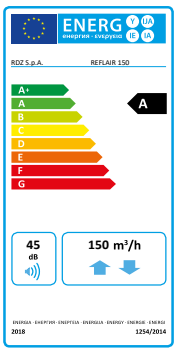
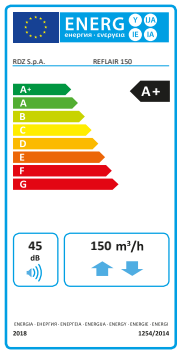
REFLAIR 150



with control:
Manual, Clock, Central demand



with control:
Local demand

MODEL	CODE
REFLAIR 150	70RFL00150

Balanced ventilation system with heat recovery features a steel and expanded polypropylene framework that is light, compact and guarantees excellent thermal insulation performance. Available in two sizes to treat different air volumes (max. 150 m³/h), Reflair features a high-efficiency (~90%) polystyrene heat exchanger, a constant-flow EC motor and ISO Coarse 65% (G4) filters. Adjustable connections and rotating fans simplify air distribution. Moreover, head loss and consumption are constant whatever the machine configuration. Reflair can be controlled with the Air Speed or the Air Control panels or integrated into the CoRe control system.

FEATURES

- Nominal air flow rate: 105 m³/h
- Max air flow rate: 150 m³/h
- Filter Iso Coarse 65% (G4)

TECHNICAL DATA

- Size lxhxd: 1100x240x585 mm
- Sound power: 45 dB(A)
- Max. electrical power: 115 W
- Elect. power supply 230 Vac - 50/60 Hz

CONNECTIONS AND FILTERS

- Air duct connections Ø 160 mm
- Condensate drain Ø 13 mm

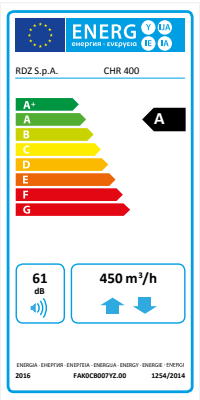
CHR 400



MODEL	CODE
CHR 400 Core	7045509

Low profile ceiling-mounted horizontal mechanical ventilation unit with double high efficiency (~90%) polystyrene heat exchanger. Made with pre-painted galvanized steel frame and internal thermal-acoustic insulation, it is equipped with constant flow rate EC motors, by-pass for free-cooling, and four NTC sensors. Antifreeze function and dirty filter detectors included. The unit is predisposed for doubling and/or mirroring the spigots both for the indoor air and for the outdoor air. It can be managed by digital input and/or control panel, or by using the RDZ electronic control unit via ModBus. CHR 400 can be combined with the DWF 400 dehumidification module. Two condensate drain kits or similar accessories are compulsory (SF-M or SF-P).

FEATURES

- Nominal air flow rate: 400 m³/h with 300 Pa
- Filter external air inlet: ISO Coarse 50% (G2) + ISO ePM10 65% (M5)
- Stale air extraction filter: ISO Coarse 65% (G4)
- Constant flow rate EC motors
- Stainless steel condensate collection tray

TECHNICAL DATA

- Size lxhxd: 1375x271x860 mm
- Sound pressure level at 1 m: 50 dB(A)
- 4 NTC sensors
- Max. electrical power: 290 W
- Elect. power supply 230 Vac - 50/60 Hz

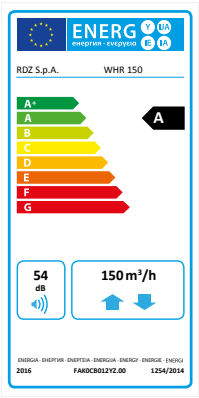
WHR 150



MODEL	CODE
WHR 150	7045627

Vertical wall-mounted controlled mechanical ventilation unit, with high-efficiency (~90%) countercurrent heat recovery system, made with a prepainted steel plate frame and internal thermo-acoustic insulation. The unit is equipped with two centrifugal fans with constant flow EC motors, 4 NTC type temperature sensors. Management via RDZ electronic control, digital inputs or room control panel. 2 siphons required (SF-M or SF-P).

FEATURES

- Boost air flow rate: 150 m³/h – 150 Pa
- Filter external air inlet: ISO ePM10 50%
- Stale air extraction filter: ISO ePM10 50%
- Constant flow rate EC motors
- Stainless steel condensate collection tray

TECHNICAL DATA

- Size lxhxd: 630x640x400 mm
- Sound pressure level: 51 dB(A)
- 4 NTC sensors
- Max. electrical power: 160 W

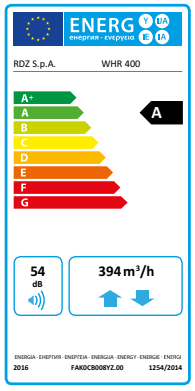
WHR 400



MODEL	CODE
WHR 400 (3E)	7045618
WHR 400 (EB)	7045619

Vertical wall-mounted mechanical ventilation unit with high efficiency polystyrene heat exchanger (~90%). Made with prepainted steel plate frame and internal thermo-acoustic insulation in rock wool, it is equipped with constant flow rate EC motors, F7 filters (ISO ePM1 70%) on the supply and exhaust lines, by-pass for free-cooling, and NTC sensors. Antifreeze function and dirty filter detection included. It can be managed using a dedicated control panel with simple display (WHR 400 3E), or a white LCD (WHR 400 EB). The unit can be combined with the DWF 400 dehumidification module and controlled through RDZ Wi controller.

FEATURES

- Nominal air flow rate: 394 m³/h with 100 Pa
- Sound pressure level at 1.5 m 42 dB(A)
- ePM1 70% (F7) Filter with low pressure drop, for both air extraction and supply
- Rockwool thermo acoustic insulation

TECHNICAL DATA

- Size lxhxd: 900x900x410 mm
- 4 NTC sensors
- Max. electrical power: 176 W
- Elect. power supply: 230 Vac - 50/60 Hz

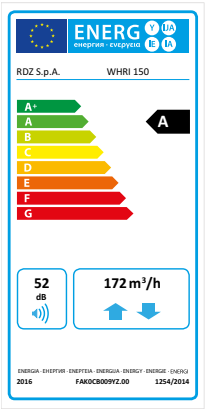
WHRI 150



MODEL	CODE
WHRI 150 (3E)	7045525
WHRI 150 (EB)	7045526

Recessed vertical wall-mounted mechanical ventilation unit consisting of a galvanized steel plate embedded box with holes for electrical and air connections, fan unit, and front panel in galvanized steel plate painted RAL 9010. The fan unit is made up of a pre-painted steel plate frame and internal thermo-acoustic insulation in rock wool. WHRI 150 is equipped with high efficiency polypropylene heat exchanger (~90%), constant flow rate EC motors, F7 filters (ISO ePM1 70%) on the supply and exhaust lines, by-pass for free-cooling and NTC sensors. Antifreeze function and dirty filter detection included. The unit can be managed using a dedicated control panel with simple display (WHRI 150 3E ventilation unit), or a white LCD (WHRI 150 EB ventilation unit).
For vertical wall installation is mandatory to use SF-M condensate drain kit.

FEATURES

- Boost air flow rate: 172 m³/h con 100 Pa
- Constant flow rate EC motors
- Rockwool thermo acoustic insulation

TECHNICAL DATA

- Size lxhxd: 520x1000x207 mm

Selection guide

Mechanical ventilation with heat recovery

The residential ventilation standard (EN 16798) differing in the fresh air flow rate calculated on each occupant.

category	comfort category	fresh air flow rate in l/sec per person	fresh air flow rate in m³/h per person
I	Excellent	10	36 approx.
II	Good	7	25 approx.
II	Adequate	4	15 approx.

For each MVHR unit, the 50% of the whole room volume is assumed as air exchange rate.
The occupancy level substained by each machine depends on the desidered comfort level.

MVHR selection chart

<table>
<tr><td rowspan="3">max occupants</td><td colspan="6">Comfort quality index depending on air exchange (EN 16798)</td></tr>

** values calculated for combined operation of two units.

VMC ≥ 500 m³/h

Reliable, efficient, and versatile mechanical ventilation unit with heat recovery for commercial application. The machine is available in six configurations including: countercurrent exchanger made of aluminium with efficiency higher than 80%, EC centrifugal fans, filter pressure switch (only with Smart EB electronics), F7 filters (ISO ePM1 70%) on the supply line and M5 (ISO ePM10 50%) on the extract line, and by-pass for free-cooling. Depending on the desired configuration, the following components may be also included: Easy or Smart control panel, canopy and IP55 switchboard, QA air quality sensor and ModBus.

Unit selection guide

Mechanical ventilation with heat recovery

HR mechanical ventilation units with heat recovery are characterized by high flow rates and are suitable for applications with large number of people.
The wide range of available sizes allows to meet the needs of rooms and buildings occupied by up to 200 people.
In the following table we report the number of people satisfied by each unit, considering an air flow rate of 11 l/s per person, as required by the UNI 10339 standard.

Air dehumidification

The best climate even in summer

Our radiant floor, ceiling and wall systems can also be used with excellent results for winter heating, and **summer cooling** too.
In summer, however, in order to maintain room comfort and avoid the risk of condensation, is essential to keep the air humidity under control.
For this reason, we offer **complete range of dehumidifiers** which meet all specific design and application requirements.

Every machine has a refrigeration unit with two additional heat exchangers, exploiting the availability of the cold water (15-18 °C) that is used in the radiant panels.
The pre-condensation water battery lowers the air temperature and reduce the sensible heat just before the evaporation coil, while the post-condensation battery lowers the air temperature before supplying it back to the rooms.
As a result, this air treatment allows to control the latent heat and supply dehumidified neutral air to the rooms.
This system also ensures higher efficiency of the chiller, because it can provide water at a higher temperature to radiant panels than the one which is usually necessary for the dehumidification

ADVANTAGES OF AIR DEHUMIDIFICATION

- INDOOR COMFORT DURING SUMMER
- INTEGRATION OF SENSIBLE HEAT (RNW 214, 411 AND 508)
- AVOID CONDENSATION ISSUES
- WIDE RANGE OF MODELS
- SILENCE FUNCTIONING AND COMPACT DIMENSIONS
- INSTALLATION VERSATILITY: EMBEDDED, ON WALL, ON FALSE CEILING

RNW 204

MODEL	CODE
RNW 204 Core	7040023

Isothermal dehumidifier designed for the control of indoor relative humidity in underfloor/ceiling/wall radiant cooling systems. It consist of a complete refrigerant unit with pre and post treatment hydronic batteries that can use the cilled water supplied to radiant systems.

The unit is available in 2 versions, depending from the accessories used:
- version for embedded installation in the wall (composed by recessed box, dehumidification unit and front panel);
- version for external installation on the wall (composed by dehumidification unit and cabinet);
Mandatory condensate drain kit.

FEATURES

- Galvanised sheet metal structure
- Stainless steel condensate collection tray
- Finned heat exchangers with hydrophilic treatment
- Dehumidification capacity: 24 l/g (26°C RH 65%)

TECHNICAL DATA

- Size lxhxd: 721x573x202 mm
- Max. electrical power: 340W
- Elect. power supply: 230 Vac - 50/60 Hz

RNW 214

SUMMER SENSIBLE POWER INTEGRATION: 860 W

MODEL	CODE
RNW 214 Core	7040121

Isothermal dehumidifier designed for the control of indoor relative humidity in underfloor/ceiling/wall radiant cooling systems, and sensible cooling power integration. It consist of a complete refrigerant unit with pre and post treatment hydronic batteries that can use the cilled water supplied to radiant systems.

The unit is available in 2 versions, depending from the accessories used:
- version for embedded installation in the wall (composed by recessed box, dehumidification unit and front panel);
- version for external installation on the wall (composed by dehumidification unit and cabinet);
Mandatory condensate drain kit.

FEATURES

- Galvanised sheet metal structure
- Stainless steel condensate collection tray
- Finned heat exchangers with hydrophilic treatment
- Dehumidification capacity: 24 l/g (26°C RH 65%)
- Summer sensible power integration: 860W

TECHNICAL DATA

- Size lxhxd: 721x573x202 mm
- Max. electrical power:340W
- Elect. power supply: 230 Vac - 50/60 Hz
- Nominal Air flow rate: 200 m³/h
- Refrigerant: R134a (260 g)
- **Water flow rate at 15 °C: 240 l/h**

RNW 508

SUMMER SENSIBLE POWER INTEGRATION: 1600 W

MODEL	CODE
RNW 508	7040050

Ductable isothermal dehumidifier with summer and winter integration for horizontal ceiling installation. It consists of a complete cooling unit (with refrigerant R134a), centrifugal fan and pre- and post-treatment coils to be supplied separately with cooled water (15 °C). It is mandatory to use 1 condensate drain kit (SF-M or SF-P).

FEATURES

- Galvanised sheet metal structure
- Stainless steel condensate collection tray
- Finned heat exchangers with hydrophilic treatment
- Dehumidification capacity: 42 l/g (26 °C RH 65%)
- Summer sensible power integration: 1600W

TECHNICAL DATA

- Size lxhxd: 825x287x585 mm
- Max. electrical power: 500 W
- Elect. power supply 230 Vac - 50 Hz
- Nominal Air flow rate: 515 m³/h
- Refrigerant: R134a (300 g)
- **Pre-treatment water flow at 15 °C 360 l/h**

DWF 200

FOR COMBINATION WITH REFLAIR UNITS

MODEL	CODE
DWF 200	7044008

Ductable isothermal dehumidification module designed for horizontal ceiling installation. It shall be combined with controlled mechanical ventilation units with suitable air flow since it does not include any fans. It consists of a refrigerant circuit (R410A) and pre and post- treatment coils to be supplied with cooled water (15 °C).
It is mandatory to use 1 condensate drain kit (SF-M or SF-P).

FEATURES

- Galvanised sheet metal structure
- Stainless steel condensate collection tray
- Finned heat exchangers with hydrophilic treatment
- Nominal air flow rate: 200 m³/h
- Dehumidification capacity: 43 l/g (33 °C 50 % RH)
- Additional sensible cooling capacity: 273 W

TECHNICAL DATA

- Size lxhxd: 552x270x635 mm
- Max. electrical power: 500 W
- Elect. power supply 230 Vac - 50 Hz
- Minimum air flow rate: 150 m³/h
- Refrigerant: R134a (284 g)
- **Pre-treatment water flow at 15 °C 300 l/h**
- **Post-treatment water flow at 15 °C 100 l/h**

Fresh air ventilation with dehumidification

Clean and fresh air for comfort and hygiene

In the rooms where we spend most of our time, it is important for our health and well-being to breath fresh and oxygen-rich air.

For this reason, we propose a series of **machines for the latent heat control** combined with the supply of fresh air with heat recovery. Designed specifically for application with radiant heating and cooling, these units are available in various models according to the intended purpose in residential or commercial application. The match between the radiant system and the air handling system ensures correct supply of primary air and thermo-hygrometric control, thus achieving the best temperature and humidity conditions in the room.

The fresh air ventilation takes place with heat recovery in order to limit the use of energy. This means high efficiency and top comfort.

ADVANTAGES OF FRESH AIR SUPPLY WITH DEHUMIDIFICATION:

- AIR RENEWAL AND DEHUMIDIFICATION COMBINED IN ONE UNIT
- SUMMER AND WINTER SENSIBLE HEAT INTEGRATION FUNCTION (ON DEMAND)
- FREE-COOLING AND FREE HEATING FUNCTIONS FOR MIDDLE SEASONS
- CLEAN AIR AND ROOM COMFORT ALL YEAR ROUND
- WIDE RANGE OF MODELS
- ENERGY SAVING

UAP 201-PDC

MODEL	CODE
UAP 201-PDC	7040202

Air handling unit for room air exchange with high efficiency heat recovery (~90%) and summer dehumidification, with the possibility of summer and winter integration operating as a heat pump (refrigerant R134a). It uses outdoor air only, and it is designed for horizontal ceiling installation. The unit can be managed either through its control panels or from an external device (via digital input), or via RDZ Wi electronic control unit. It is mandatory to use 2 condensate drain kits. It is mandatory to use 2 condensate drain kits (SF-M or SF-P).

FEATURES

- Dehumidification capacity: (35 °C RH 50% EXT - 26 °C RH 65% INT) with flow rate 200 m³/h: 38.7 l/24h
- Additional sensible cooling capacity up to 770 W, winter 1090 W.

TECHNICAL DATA

- Size lxhxd: 825x244x1118 mm
- Max. electrical power: 590 W
- Elect. power supply 230 Vac - 50 Hz
- Refrigerant: R134a (250 g)
- **Water flow rate (at 15 °C): 240 l/h**

CONNECTIONS AND FILTERS

- Air duct connections Ø 160 mm
- Hydraulic connections ½" F
- 2 condensate drain Ø 14 mm

UC 300 V2

MODEL	CODE
UC 300 V2	7041308

Air handling unit for room air exchange with high efficiency heat recovery (~90%) and for summer dehumidification. Fresh air intake flow-rate and supply air flow-rate are handled separately (partial recirculation of air is possible). The fresh air flow-rate can be set from 80 to 160 m^3/h, while the supply air flow rate can be set from 160 to 300 m^3/h. The unit can be managed either through its control panels or from an external device (via digital input), or via RDZ Wi electronic control unit. It is mandatory to use 2 condensate drain kits (SF-M or SF-P).

FEATURES

- Dehum. capacity (recirculation): 38.7 l/24h at (26 °C RH 65%)
- Dehumidification capacity (renewal) 51.4 l/24h at (35 °C RH 50%)
- Additional sensible cooling capacity: 900 W
- Stainless steel condensate collection tray

TECHNICAL DATA

- Size lxhxd: 773x276x1171 mm
- Max. electrical power: 494 W
- Elect. power supply 230 Vac - 50 Hz
- Refrigerant: R290 (95 g)
- **Nominal water flow capacity (at 15 °C): 410 l/h**

UC 501-MHE

MODEL	CODE
UC 501-MHE	7041456

Air handling unit with high-efficiency heat recovery for ventilation and summer dehumidification. The high-efficiency counter-current heat exchanger (~90%) is situated in the exhaust air duct. Air outlets (in- and outward ducts) on the two shorter opposite sides, which means that the ductwork can be connected easily, and it can be installed in narrow spaces. Operations: fresh air ventilation, air recirculation, free cooling, booster, dehumidification, integration of summer and winter sensible capacity (external input). Condensed by air. Free additional sensible cooling without using cool water from the chiller. It is mandatory to use 3 condensate drain kits (SF-M or SF-P).

FEATURES

- Dehumidification capacity (recirculation): 31.2 l/24h at (26 °C RH 55%)
- Dehumidification capacity (renewal): 74.1 l/24h at (35 °C RH 50%)
- Additional sensible cooling capacity: 1870 W
- Stainless steel condensate collection tray
- Finned heat exchangers with hydrophilic treatment

TECHNICAL DATA

- Size lxhxd: 1287x424x961 mm
- Max. electrical power: 1100 W
- Elect. power supply 230 Vac - 50 Hz

UC 500-MVHE

MODEL	CODE
UC 500-MVHE	7041451

Vertical unit for fresh air ventilation with high efficiency heat recovery (~90%) and for summer dehumidification. The flow rate of inlet fresh air and supply air can be managed independly, allowing the unit to work with partial air recirculation (fresh air supply flow rate 100÷400 m³/h - supply air flow rate 300÷500 m³/h). Functionality of air renewal, air recirculation, free-cooling, boost, dehumidification and sensible power integration for heating and cooling. Unit can be either managed through the remote control panel Type 1 or Wi controller. It is mandatory to use 2 condensate drain kit.

FEATURES

- Dehumidification capacity: (recirculation 500 m³/h) 61.9 l/24h at (26 °C RH 55%)
- Dehumidification capacity: (renewal) 95.1 l/24h at (35 °C RH 50%)
- Additional sensible cooling capacity: 1925 W
- Stainless steel condensate collection tray
- Finned heat exchangers with hydrophilic treatment

TECHNICAL DATA

- Size lxhxd: 900x1465x570 mm
- Max. electrical power: 800 W
- Elect. power supply 230 Vac - 50 Hz
- Refrigerant: R410a (770g)
- **Water flow capacity (at 15 °C): 500 l/h**

Selection guide

Air renewal with dehumidification

The residential ventilation standard (EN 16798) identifies:

3 categories of air exchange according to the flow of fresh air considered for each occupant.

category	fresh air flow rate	
	in l/sec per person	in m³/h per person
I	10	~ 36
II	7	~ 25
II	4	~ 15

2 levels of acceptability of specific humidity.

level	specific air humidity $g/kg_{d.a.}$	corresponding value
I	12	26 °C - 57 % R.H.
II	13	26 °C - 62 % R.H.

RDZ defined a matrix identifying 6 comfort levels based on the required degree of ventilation and dehumidification

comfort level	fresh air flow rate L/sec per person	specific humidity of the room air in $g/kg_{d.a.}$
A - excellent	10	12 (26 °C - 57 %)
B- extremely good	10	13 (26 °C - 62 %)
C - very good	7	12 (26 °C - 57 %)
D - good	7	13 (26 °C - 62 %)
E - fair	4	12 (26 °C - 57 %)
F - Adequate	4	13 (26 °C - 62 %)

Our experience leads us to suggest considering a humidity value of 12 $g/kg_{d.a.}$ as a reference value.

UC 701

MODEL	CODE
DA 701	7041701
SR 701	7041711

Air handling unit designed for horizontal ceiling installation, combining the DA 701 dehumidifier and the SR 701 heat recovery unit. Possible operations: air recirculation, fresh air ventilation (100% outdoor air), summer dehumidification, additional sensible heating and cooling capacity. Modulating valve is compulsory. It is mandatory to use 2 condensate drain kits (SF-M or SF-P).

FEATURES

- Dehumidification capacity (recirculation): 93.2 l/24h at (26 °C RH 65%)
- Dehumidification capacity (renewal): 163.1 l/24h at (35 °C RH 50%)
- Additional sensible cooling capacity: 2295 W
- Stainless steel condensate collection tray
- Finned heat exchangers with hydrophilic treatment

TECHNICAL DATA

- Size lxhxd: 1000x388x1517 mm
- Max. electrical power: 1230 W DA + 300 W SR
- Elect. power supply 230 Vac - 50 Hz
- Refrigerator: R410a (1060 g)
- **Pre-treatment water flow rate at 15 °C: 750 l/h**
- **Condensation water flow rate at 15 °C: 110 l/h**

CONNECTIONS AND FILTERS

- Air duct connections EXT+REC: 616x327 mm; SUP: 231x207 mm; IN: 400x327 mm; OUT: 231x207 mm

Summary table of control systems.

Control panels for our air handling units allow you to set up and display the operation of specific machines in a simple and intuitive way. Thanks to the constant air quality monitoring, rooms are always healthy and pleasant to live in.
The new knx-UTA interface also allows the air handling units to be integrated into a home automation system with knx protocol for even smarter management of the entire system.

CORE AIR SPEED

MODEL	CODE
CORE AIR SPEED	7041476

Core Air Speed controls the air renewal unit and displays the related data. Four capacitive touch keys let you select air flow rate, the duration of the boost and switch the unit off. A red LED warns you when the filters need to be replaced.

The module handles:
- Machine shutdown;
- Economy flow rate setting;
- Renewal flow rate setting;
- Boost activation;
- Boost duration setting;
- Filter and machine alarm display;

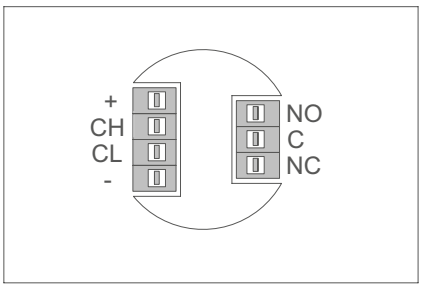
FEATURES

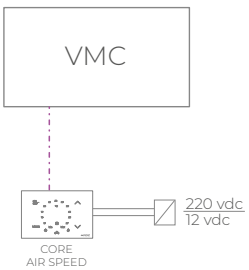
- Elect. power supply 12 V AC/DC
- 2x05 mm² twisted and shielded BUS cable
- Current consumption: 100 mA

INSTALLATION

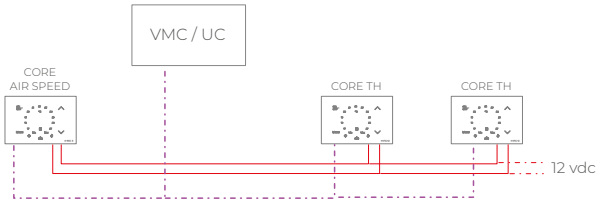
- Horizontal wall installation on 502 or 503 box Ø 60 mm.

ELECTRICAL CONNECTIONS





Connector		Description	Cables mm²
+	+ 12 vdc	Elect. power supply	2x0,5
-	0 vdc		
CH	Can +	BUS	2x0,5 shielded
CL	Can -		



CORE AIR CONTROL

MODEL	CODE
CORE AIR CONTROL	7041477

The Core Air Control graphic interface is used to control air renewal, dehumidification and temperature. The touchscreen lets you set and display the main operating parameters of the air handling unit.

The module handles:
- Machine switch-off;
- Setting economy flow rate;
- Renewal flow rate setting;
- Boost activation;
- Boost duration setting;
- Setting operating time zone;
- Management of dehumidification and sensitive thermal integration when combined with machines with air after-treatment;
- Display of machine operating status and modification of unit parameters;
- Display of filter and machine alarms;

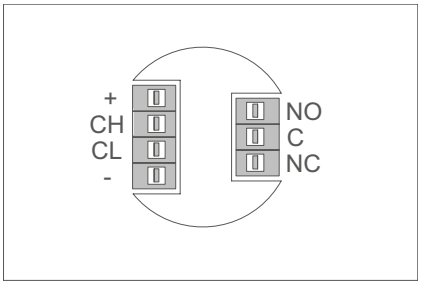
FEATURES

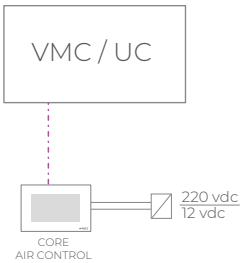
- Elect. power supply 12 V AC/DC
- 2x05 mm² twisted and shielded BUS cable
- Current consumption: 60 mA

INSTALLATION

- Horizontal wall installation on 502 or 503 box Ø 60 mm.

ELECTRICAL CONNECTIONS





Connector		Description	Cables mm²

KNX-UTA - Interface

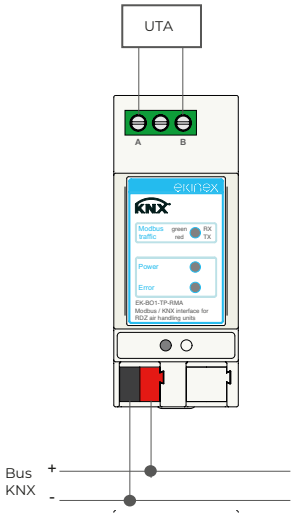
MODEL	CODE
KNX-UTA	7041480

Interface for integrating the ventilation unit into home automation systems with KNX protocol. It is possible to display operating statuses, alarms and modify the unit's operating parameters.

FEATURES

- 30 Vdc from KNX bus line
- 2x05 mm² twisted and shielded BUS cable +2x0,6 mm2 KNX BUS cable
- Current consumption (from main bus line) < 13 mA

ELECTRICAL CONNECTIONS



Connector	Description	Cables mm²
A	MODBUS	2x0,5 shielded
B		
-	KNX	2x0,6
+		

INSTALLATION / CONFIGURATION

- installation on DIN rail 2 modules
- Application program: APEKBO1RMATP##.knxprod (## = version)

Compatible with ETS 5 program or later versions

Easy 3E - Control panel

This remote control panel can be embedded into a 503 box and connected to the unit via digital input (on-off and remote speed). It manages the following functions: switching the unit on and off, setting speed from 3 pre-set flow rates, opening and closing the by-pass, frost protection, dirty filter detection, and temperature sensor fault detection.Possibility of (automatic) control over any antifreeze element.

FEATURES

- Led for operating status and alarms
- 2 membrane buttons
- Adapters for different civil series included

INSTALLATION

Horizontal wall embedded installation on 502 or 503 box

Smart EB - Control panel

This white remote control panel can be mounted on a 503 box for protruding wall installation. It is equipped with low profile LCD as well as built-in humidity and temperature sensors. Smart EB CONTROL PANEL allows the automatic speed setting according to humidity, air quality, temperature; alternatively, it is possible to manually select 3 pre-set flow rates and diversify the speed between the supply and extract fans. Smart EB CONTROL PANEL manages the following functions: automatic opening and closing of the by-pass, frost protection, dirty filter detection, hourly or weekly scheduling, display of active alarms and alarm history, automatic control of any post-treatment batteries/heaters.

FEATURES

- 2x16 backlit LCD display
- Embedded temperature and humidity probe
- 5 membrane buttons

INSTALLATION

Horizontal wall installation on 502 or 503 box

ELECTRICAL CONNECTIONS

- RJ45 connector on panel's board and on AHU for power supply and communication
- Provided with 3 m cable
- Possibility to extend the cable up to 30 m
- Possibility to use UTP cat.5 or cat.5E straight through cable

User Display - Control panel

MODEL	CODE
USER DISPLAY	7041470
TH USER DISPLAY	7041475

LCD room thermostat with 320x240 pixel screen resolution, 16 colours, built-in fonts and 6 capacitive touch keys. It shows working conditions and alarms, and it is used to change the parameters of the air handling unit. Furthermore, the user can set the time slots, the operating mode as well as the air flow rate during ventilation.

The **USER DIPLAY TH** version is equipped with temperature and humidity sensors to control the dehumidification and the integration of sensible capacity in both summer and winter.

FEATURES

- Backlit graphic LCD display
- Resolution 320x240 pixel
- 6 capacitive keys
- Temperature and relative humidity probe embedded in TH version

Remote Control - Type 1

MODEL	CODE
REMOTE CONTROL for UC 500-MVHE	7041460
REMOTE CONTROL for UC 501-MHE	7041465

DIN rail control panel (6 modules) for displaying operations and setting unit parameters. The signals for dehumidification, summer/winter integration, boost, and free-cooling must be connected to the panel. Fresh air ventilation can be activated manually or by time scheduling.

FEATURES

- Power Supply: 24 Vac
- Digital inputs for unit management
- BUS connection for displaying operations and setting unit parameters

INSTALLATION

FLOW METERS

Direct hydraulic balancing and control of flows to consumers or in a subsystem. Balancing valves offer a quick, easy and accurate method of adjusting the flow rates through heating, ventilation, air conditioning and cooling systems. Correct balancing of hydraulic circuits ensures optimum energy distribution, resulting in more efficient and economical operation in accordance with the energy saving regulations provided for by legislation. With flow measuring unit, any qualified fitter can set the appropriate flow rate using the unique flow measurement device,avoiding investments in training and costly measuring devices.

Air distribution system

The modular and invisible solution to supply fresh and clean air to every room

With the modern manufacturing technology and the growing awareness regarding energy saving, the new trend in the construction field promotes buildings, which become more and more insulated from the thermal standpoint but deficient in ventilation, i.e. in the natural and spontaneous exchange of the room air through windows and walls.

In order to ensure maximum health and living comfort all year round, we have enriched our product range with a series of ductable units for ventilation and air handling in residential buildings, which can be combined with a suitable air distribution system.
This is made by a series of channels that carries the **clean and dehumidified air** to the rooms, taking stale air from them and conveying it outside.

A wide range of ducts, plenums, vents and accessories completes the system and allows it to be customized according to design and site requirements.
Thanks to the **high modularity** of all components, installation is easy and quick.

AIR DISTRIBUTION SYSTEM ADVANTAGES:

- **MODULAR, QUICK AND EASY INSTALLATION**
- **LOW NUMBER OF COMPONENTS**
- **COMPLETE RANGE OF PRODUCTS**
- **EASY MAINTENANCE AND CLEANING**
- **POSSIBILITY OF CEILING, FLOOR AND WALL INSTALLATION**

EXAMPLE OF AIR DISTRIBUTION SYSTEM

The image below represents a possible configuration for air distribution system with rigid ducts for main air ductworks.

The main air ductwork is made with **EPE system** in expanded polyethylene, made up of elastic and resistant components that offer excellent thermal insulation performance and low pressure drops thanks to the smooth inner surface. Lightweight and modular, it lends itself to practical and quick installation, and guarantees a pleasant and well-finished aesthetic result.

The room air ductwork is made with **Duo White system**: semi-rigid ducting, accessories and air distribution boxes. Thanks to the use of Sanitized® technology, the components are sanitized for their entire life cycle. The modular composition of air distribution boxes allows to customize the system starting from a few basic elements, in order to satisfy any design or installation need.
Metal grilles and circular air extraction valve, that are characterized by elegant and minimal design, complete the room air ductwork, while the round outdoor ventilation grilles protect the ducting.

EXAMPLE OF AIR DISTRIBUTION SYSTEM

The image below represents a possible configuration for air distribution system with flexible ducts for main air ductworks.

Flex system connects the AHU unit to the outside and with the air distribution boxes. Central element of this solution is the flexible ducting, available in different variants with thermal and acoustic insulation performances. Light and resistant, it's easy to install and ideal as main air ductwork for horizontal AHU placed in the false ceiling.

The room air ductwork is made with **Duo White system**: a set of sanitized semi-rigid ducts and accessories. Thanks to the use of ducts with reduced section, is possible to realize a system with minimum lowering of the ceiling.
The extraction ducts convey the polluted air into PLD-U modular air distribution box made of galvanized steel plate with soundproofing insulation; from the PLD-S, modular air distribution box with sounproofing baffles, departs the air ductworks to the rooms.

Semi-rigid ducting, accessories and air distribution boxes. Thanks to the use of Sanitized® technology, the components are sanitized for their entire life cycle. The modular composition of air distribution boxes allows to customize the system starting from a few basic elements, in order to satisfy any design or installation need.
Metal grilles and circular air extraction valve, that are characterized by elegant and minimal design, complete the room air ductwork, while the round outdoor ventilation grilles protect the air inlet and air intake and air outlet ductings.

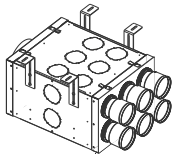
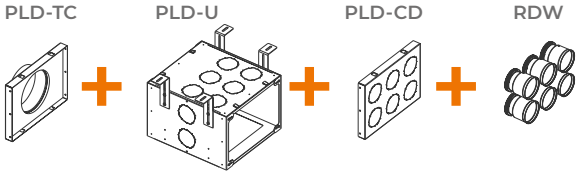
MODULAR AIR DISTRIBUTION BOX

PLD is a modular air distribution box for the Duo White system. Thanks to its composition it can be customized starting from a few elementary elements, in order to satisfy any design or installation need.

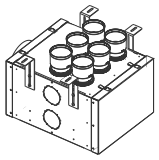
Componenti:
PLD-U: universal distribution box
PLD-S: silenced distribution box
PLD-TC: cover with flared sleeve
PLD-CD: cover for room air distribution
PLD-T: closing plate
RDW: fitting for the connection of Duo White duct to the distribution box
TPL: blanking cap for closing the unused outlets
PLD-KR: fitting kit

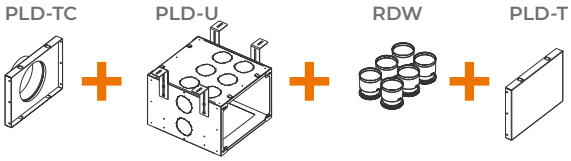
Universal air distribution box with **in-line connections**



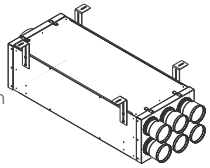


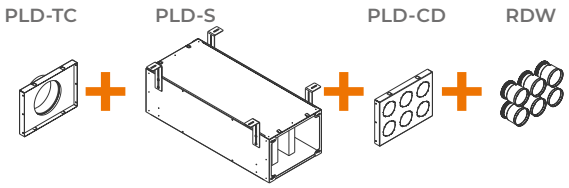
Universal air distribution box with **angle connections**



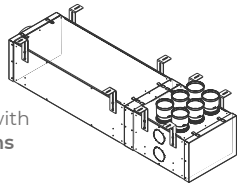


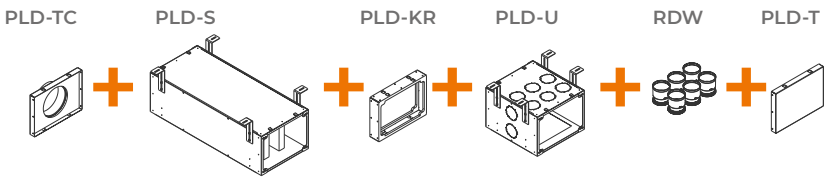
Silenced air distribution box with **in-line connections**





Silenced air distribution box with **angle connections**





PLD-U

Universal modular distribution box with inspection hatch. Central body in galvanised sheet metal.
Soundproofing internal insulation made of open-cell polyurethane. Prepared for connection of the pipes on the upper and lateral side.
Available with 6 or 10 connections (OUT).

NAME	SIZE hxlxp	OUTLETS	PACK.	CODE

PLA 1

Room plenum in ABS, swivelling for the connection of DN 75 or DN 90 flexible pipe.
Single side outlet possible.
Recessed depth adaptable by means of adjustable brackets.
Supplied with:
- ABS Brackets for wall mounting
- Levels for correct alignment
- Sealed protective cover
- Protective polystyrene for plastering

NAME	N. OUTLETS	PACK.	CODE
PLA 1	1	1 item	7046430

PLA 2

Room plenum in ABS with 2 outlets, swivelling for the connection of DN 75 or DN 90 flexible pipes.
Possibility of a 1 outlet from the side, 2 from the rear, 2 from the bottom or 2 from the top.
Recessed depth adaptable by means of adjustable brackets.
Supplied with:
- 4 end caps for unused outlets
- ABS Brackets for wall mounting
- Levels for correct alignment
- Sealed protective cover
- Protective polystyrene for plastering

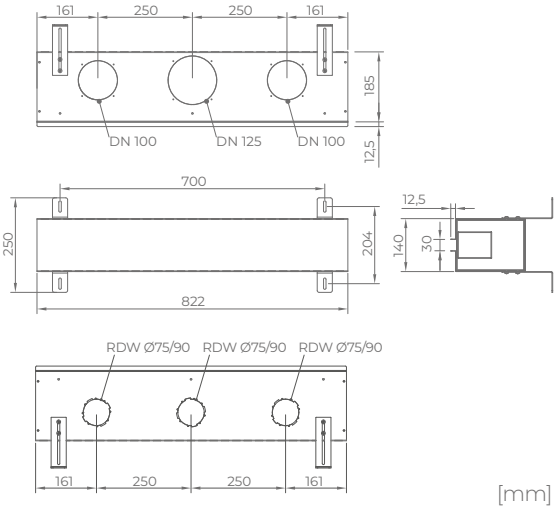
LINEAR AIR DIFFUSER



[mm]

PLA-FLOW

Hidden linear ceiling or high wall diffuser designed for efficient air distribution. Used for both air supply and return, it is made of galvanised sheet metal and designed to be fully integrated into the false ceiling.

- *Installation on ceiling*
- *Airflow rate adjustment*
- *Maximum flow rate 150 m³/h*
- *3 filters (optional) in supply line to be ordered separately*

pre-arranged connections:
- *3 x Duo White 75/90*
- *2 x Dn 100*
- *1 x Dn 125*

NAME	SIZE LXHXD	PACK.	CODE

LowAir Duct Connector

Antistatic and antibacterial coupler for straight connection of flat ducting. Suitable for ceiling or wall installation, it is easy to assemble with sealing ring gasket.

SIZE	PACK.	CODE
50x102 mm	1 item	7046105

LowAir Duct Ring

Ring made of composite PP and TPE material for sealing connections between flat ducting. Its high flexibility makes installation easier and ensures airtight connections.

To be used with:
- LowAir connector
- LowAir horizontal bend
- LowAir vertical bend
- LowAir DW Ø75 adapter

PACK.	CODE
10 items	7046110

Cap for LowAir Connectors and Plenum

Antistatic and antibacterial closing cap for unused plenum spigots (102x50 mm).

SIZE	PACK.	CODE
50x102 mm	1 item	7046115

LowAir Horizontal Bend

Antistatic and antibacterial PP bend with minimum pressure loss. It is suitable for wall, floor, and ceiling installation, and it is used to avoid obstacles.

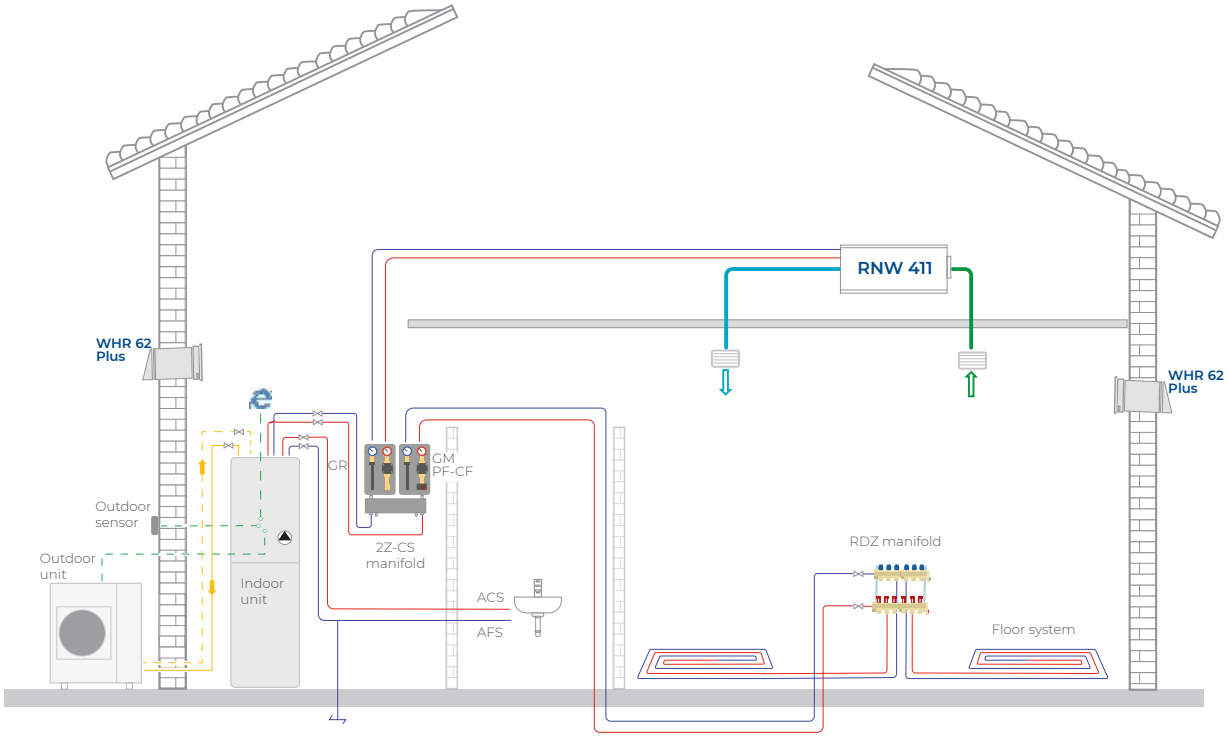
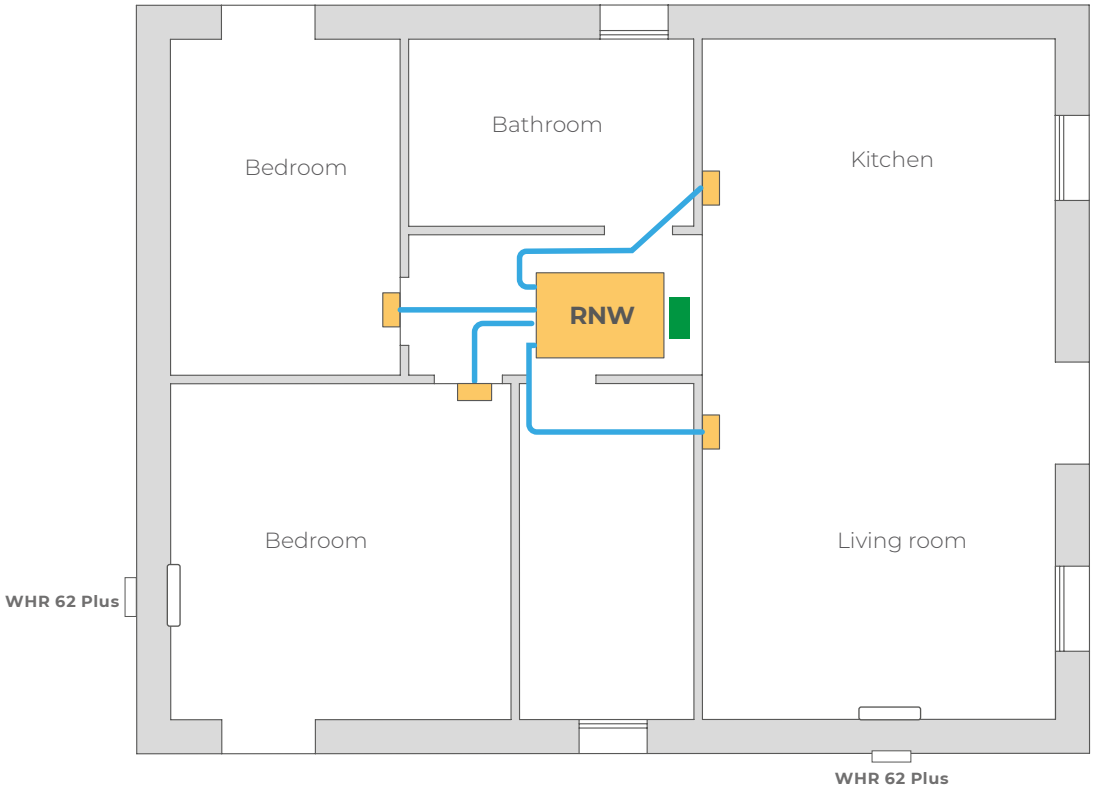
SYSTEM LAYOUT WITH RNW 411 AND WHR 62 PLUS

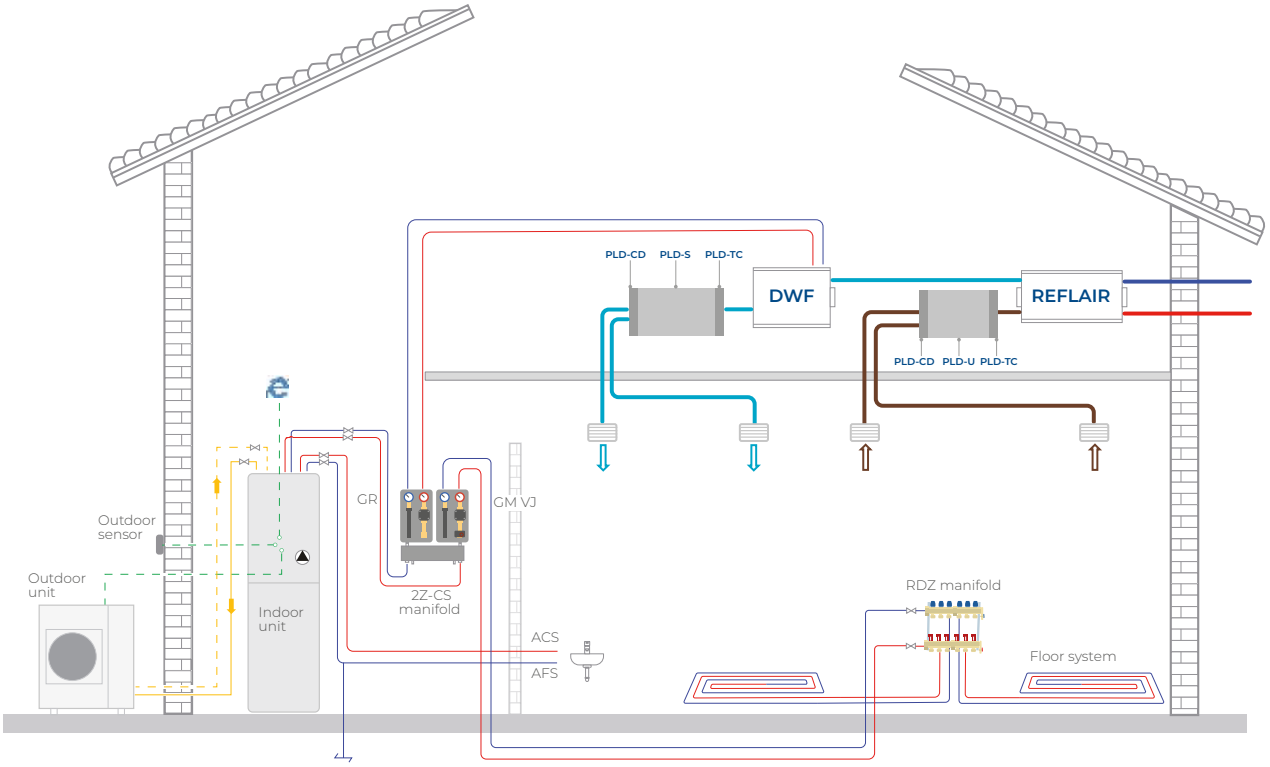
The diagram shows a heating and cooling system with FLOOR split heat pump and domestic hot water production in a 200-liter technical tank with instantaneous exchange and internal coil. On the system side there is a manifold with separator function combining a GM PF-CF mixing group to serve a radiant system in winter and summer, and a GR direct supply unit to serve the RNW 411 unit for dehumidification and integration. Air exchange is achieved with WHR 62 wall-mounted heat recovery units.

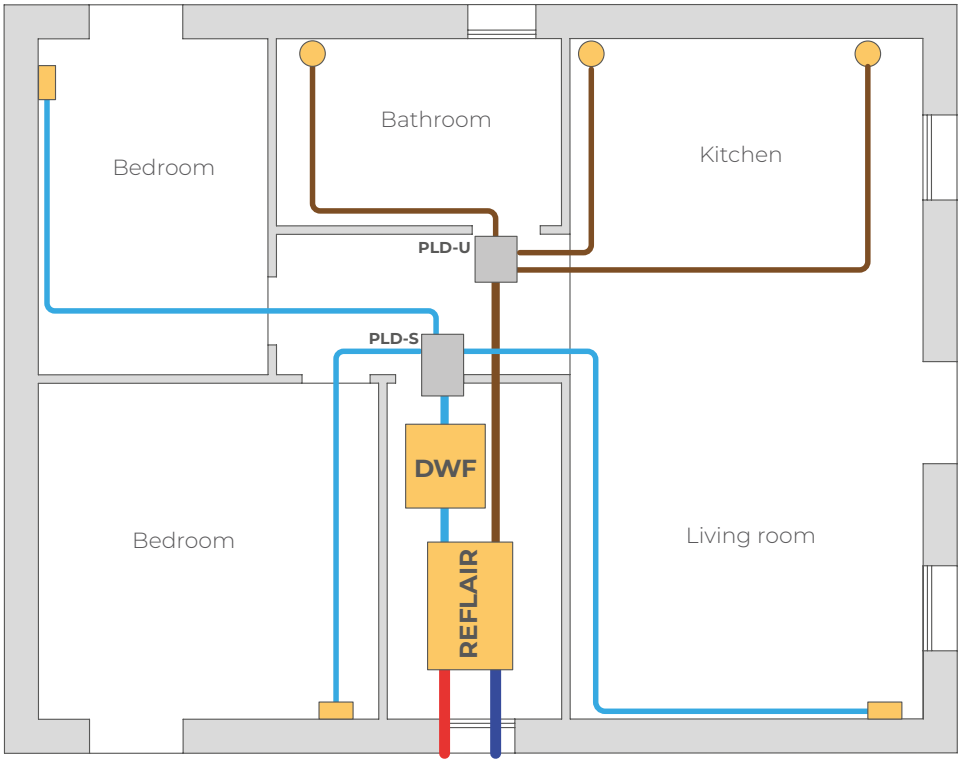




SYSTEM LAYOUT WITH REFLAIR 250 AND DWF 200

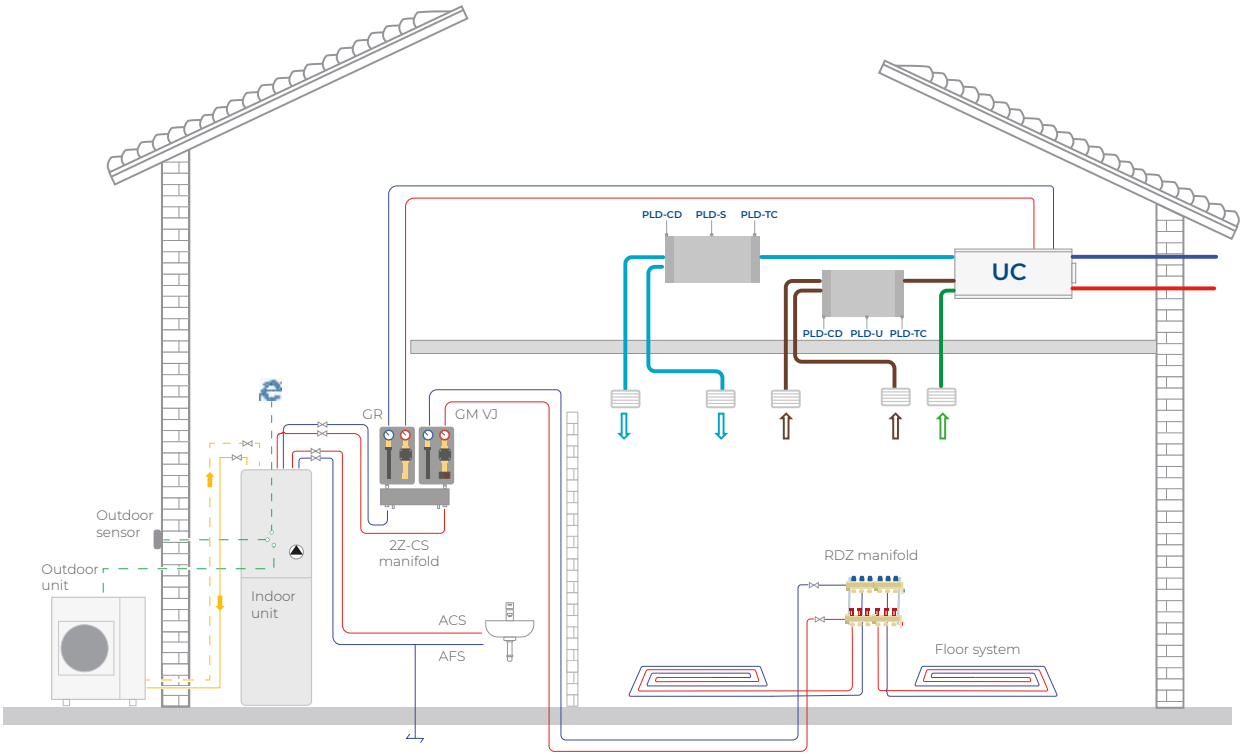
The diagram shows a heating and cooling system with FLOOR split heat pump and domestic hot water production in a 200-liter technical tank with instantaneous exchange and internal coil. On the system side there is a manifold with separator function combining a GM VJ mixing group to serve the radiant system, and a GR direct supply unit to serve the air handling unit consisting of the DWF 200 dehumidification module and the high-efficiency REFLAIR 250 air handling unit.

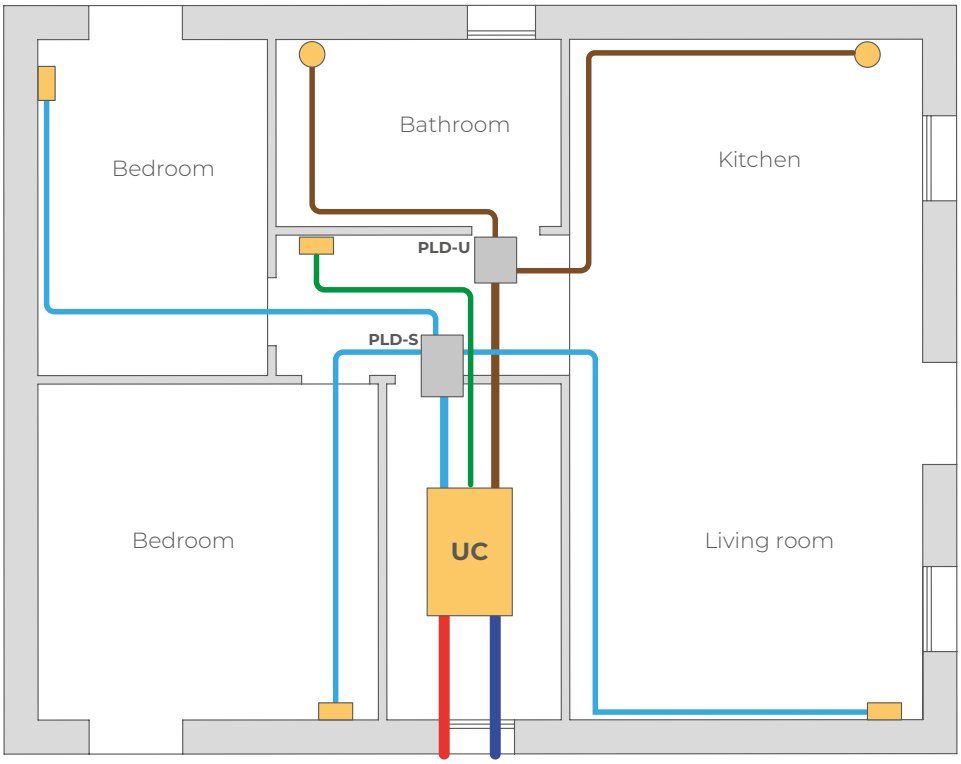




SYSTEM LAYOUT WITH UC

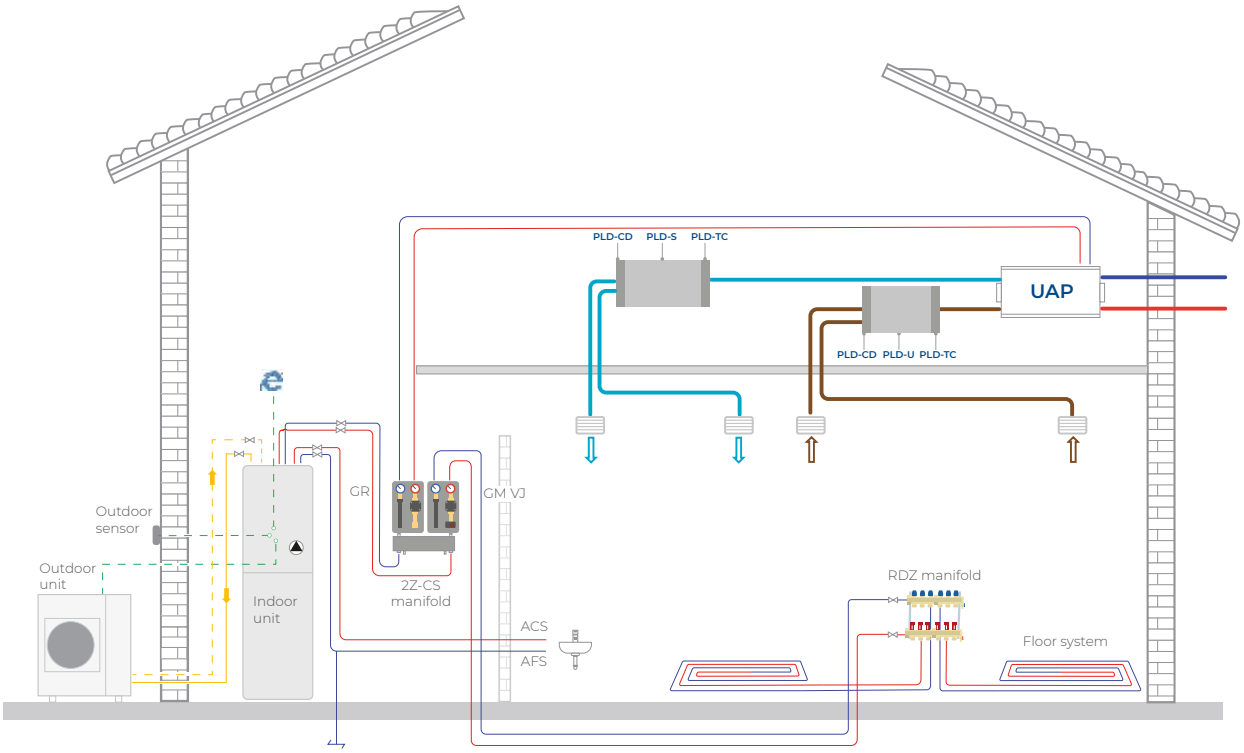
The diagram shows a heating and cooling system with FLOOR split heat pump and domestic hot water production in a 200-liter technical tank with instantaneous exchange and internal coil. On the system side there is a manifold with separator function combining a GM VJ mixing group to serve the radiant system, and a GR direct supply unit to serve the air handling unit. Air exchange with heat recovery as well as summer dehumidification and integration are achieved by means of UC 300 V2 ceiling-mounted air handling unit.

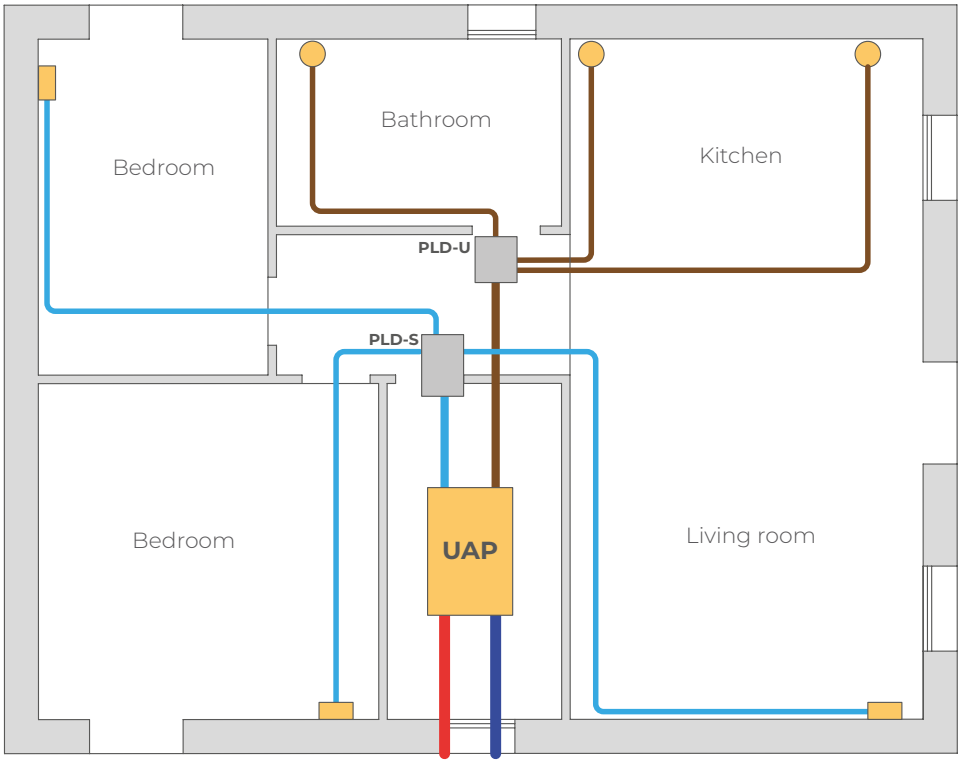




SYSTEM LAYOUT WITH UAP

The diagram shows a heating and cooling system with FLOOR split heat pump and domestic hot water production in a 200-liter technical tank with instantaneous exchange and internal coil. On the system side there is a manifold with separator function combining a GM VJ mixing group to serve the radiant system, and a GR direct supply unit to serve the air handling unit. Air exchange with heat recovery as well as summer dehumidification and integration are achieved by means of UAP 201-PDC ceiling-mounted air handling unit.





The proposed layouts are only indicative.

Our history

For 45 years
we have been
a worldwide reference company
in the field of heating
and cooling systems.
We work with passion
to ensure indoor comfort
thanks to innovative solutions,
specifically for residential,
commercial and
industrial buildings.
We design and produce
high-efficient and
high-performance systems
which offer energy saving,
comfort and health
throughout the year.
Invisible solutions
spreading a unique sensation
of wellbeing in any room.
